| What is SSID? .....                                  | 04 |
| Change your wireless<br>SSID name and password ..... | 05 |

## How to log in to your router

- 1 You need to be connected to the router wirelessly or by ethernet.
- 2 Open a web browser on your chosen device.
- 3 Enter **192.168.1.1** into your web browser and press **enter**. At this point, the router login screen will appear.

- 4 The username is '**admin**', and the password is what was set up at the time of installation.

If you do not know this or you have forgotten, please call our support team on **0330 088 8383**, or email us at **support@be-fibre.co.uk**.

- 5 You should now be logged in and see the dashboard.

# What is SSID and what does it stand for?

SSID stands for **Service Set Identifier** and is your wireless network name.

If you open the list of Wi-Fi networks on your laptop or phone, you will see a list of SSIDs. Wireless routers broadcast SSIDs so nearby devices can find and display available wireless networks.

# How do I change my wireless SSID name and password?

- 1 From the dashboard screen, click on **WiFi** (left-hand side menu).

- 2 This will open a wireless subcategory. Click on **Networks**.

- 3 To the right you will now see the wireless network menu (this is where you can edit both the SSID and wireless password).

- 4 Within the wireless network menu, scroll down to **Wi-Fi configuration**.
- 5 At this point, simply edit the SSID/password to be whatever you desire (we recommend using an 8-digit wireless password).

A screenshot of a 'Wi-Fi Configuration' form. It has two input fields: 'SSID' with the text 'BeFibre' and 'Password' with a masked password '.....'. Both fields have a small circular icon to their right.

- 6 Once you have set your chosen SSID/password, a pop-up will appear asking you to apply your changes. Click **apply**.
