Support guide

Setting up your BeTalk telephone adapter

(!) **When using the Linksys app they will refer to BeTalk as a Cisco ATA 192 telephone adapter.**

1 Take your network cable and plug it into the 'NETWORK' port on your ATA device.

2 Plug the other end of your network cable into a LAN port on the back of your router.

3 Connect your ATA's power supply.

4 The power and network icons will show green.

5 After a minute or two, the orange light will begin to flash green, meaning it is downloading the ATA device configuration from the network.

6 Once the power, internet and port lights are a stable green your ATA device is configured and ready to use.

7 Finally, plug your handset into the 'Phone1' port on your ATA device.

You can now make and receive calls just as you would with any other phone.
